BARCODE 2000

Design and print labels quickly and easily

Simple and easy-to-use, **BARCODE 2000 Version 6.0** is the leading barcode label design software solution for Linux and Unix operating platforms.

Integrates smoothly into Linux/Unix enterprise network support

BARCODE 2000 Version 6.0 enables end users to print bar-coded shipping and other production labels anywhere on most popular printers.

Cost effective

BARCODE 2000 Version 6.0 is competitively priced and is available to ISVs, OEMs and systems integrators at generous discount levels.

BARZ_OUT PRO

Add 1D and 2D barcodes to invoices, packing slips, pick lists, labels, purchase orders and other documents

BARZ_OUT PRO works without programming modifications and can be used on virtually any UNIX or Linux operating system.

Quick, easy-to-use and affordable

When installed on a server, **BARZ_OUT PRO** can be used virtually by everyone on the network, without the need for additional software or programming.

Flexible

BARZ_OUT PRO is available in two versions. The Enterprise version is for medium to large businesses that need to support a large number of users and printers. This version enables greater control over output. The Printer version is for smaller businesses with up to five printers.
